                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel recombinant antigens and their encoding
                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                        Antigen; diagnosis; detection; infection; antibody; immunisation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptide comprising antigenic portions of M. tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Sequence 8, Application US/08452592B

Patent No. 5712366

GENERAL INFORMATION:

APPLICANT: McGrath, Kevin P.

APPLICANT: Kaplan, David L.

TITLE OF INVENTION: Fabrication of Nanoscale Materials Using

TITLE OF INVENTION: Fabrication of Nanoscale Materials Using

TITLE OF INVENTION: Fabrication of Nanoscale

NUMBER OF SEQUENCES: 11

CONRESPONDENCE ADDRESS:

ADDRESSEE: U.S. Army Soldier Systems Command

STREET: AMSCC-CC (Patent Counsel)

COUNTRY: United States of America

STATE: Massachsuetts

COMPUTER: Readable Forms

MEDIUM TYPE: Ibs PC Compatable

COMPUTER: IBM PC Compatable

COMPUTER: SYSTEM: DOS 6.22

SOFTWARRE: WordPerfect Version 6.1

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/452,592B

FILING DATE: 25 May 1995

PRICING DATE: 25 May 1993

ATTORNEY/AGRENT INFORMATION:

PIR\_68:\* 1: pir1:\* 2: pir2:\* 3: pir3:\* 4: pir4:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

pre-mRNA splicing factor prpl - fission yeast (Schizosaccharomyces pombe)
C; Species: Schizosaccharomyces pombe
C; Species: Schizosaccharomyces pombe
C; Date: 21-3an-2000 #text_change 18-Feb-2000
C; Accession: T45158; T40648
R; Urushiyama, S:; Tani, T.; Ohshima, Y.
submitted to the EMBL Data Library, February 1996
A; Description: The prpl+ gene of Schizosaccharomyces pombe encodes a protein with PW A; Reference number: 222934
A; Reference number: 222934
A; Molecule type: DNA
A; Residues: 1-906 <URU>A; Residues: 1-906 <URU>A; Residues: 1-906 <URU>A; Residues: 1-906 <URU>A; Rajandream, M.A.; Barrell, B.G.; Hamlin, N.; Churcher, C.M.

                                                                                                                                                                                                                                                                                                      -!- FUNCTION: PREFERENTIALLY CLEAVES ALPHA-1,3 AND ALPHA-1,4 GLYCOSIDE LINKAGES. INVOLVED IN THE HYDROLYSIS OF THE GALACTOMANNAN, IT SPATHS ALPHA-LINKED GALACTOSE MOTETIES. IT IS PARTICULARLY SUITABLE FOR THE HYDROLYSIS OF GUAR GUM TO A GUM WITH IMPROVED GELLING PROPERTIES. CAN CLEAVE FERMINAL ALPHA-1,3-LINKED GALACTOSE RESIDUES RESPONSIBLE FOR BLOOD GROUP B SPECIFICITY FROM THE SURFACE OF ERYTHROCYTES THEREBY CONVERTING THESE CELLS SEROLOGICALLY TO GROUP O.

-!- CATALYTIC ACTIVITY: MELIBIOSE + H(2)O - GALACTOSE + GLUCOSE.

                                                                                                                                                                                                                                                                                                                         The present invention is directed to a polynucleotide carrying the regulatory expression signals of the ESAT-6 protein as well as an open reading frame coding for an antigenic protein LHP from Mycobacterium tuberculosis. Host cells comprising the polynucleotide are used for the recombinant expression of the protein. The recombinant polypeptide can be used as immunogens and vaccines, to protect against bacteria of the CM. tuberculosis complex in humans or animals (the vaccines may include other immunogenic proteins of the bacteria or their fragments, specifically ESAT-6); and (b) for diagnosing tuberculosis infection by detection of specific antibodies. The requilatory region present in the polynucleotide may be used to express almost any heterologous protein in grobacteria, particularly as a fusion with polyhistidine. The two proteins encoded by the polynucleotide, LHP and ESAT-6, are expected to provide a synergistic increase in ability to induce a protective immune conservative and processed to response. The present sequence represents the LHP polypeptide.
                                                                                                                                                                                                                                                                                                   ;

                                                                                                                                                                                                                                                                                                                                                                                          Q
```

```
This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This polypeptide comprises a partial sequence of Mycobacterium tuberculosis antigen Tb38-IN. It is encoded by genomic DNA isolated from a M. tuberculosis strain H37Rv genomic library using a probe derived from clone Tb38-1 (see AAV44384). The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAV64291-W64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or kransfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and primers, for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

This invention describes novel recombinant antigens and their encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MAEMKTDAATLGQEAGNFERISGDLKTQIDQVESTAGSLQGQWRGAAGTAAQAAVVRFQE 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 maemktdaatlaqeagnferisgdlktgidqvestagslqgqwrgaagtaaqaavvrfqe 60

                                                                                         ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T. B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAZ19249 to AAZ19460 and AAX39083 to AAX39225 are used in the exemplification of the present invention.

The present sequence is that of the Mycobacterium tuberculosis MTBN4 protein. This is 1 of 8 proteins, i.e. MTBN1-8 (see AABB942-49), encoded by 8 open reading frames (see AAAB8935-42) identified as being present in the genome of M. tuberculosis but absent from the genome of the BCG strain of Mycobacterium bovis. MTBN1-8 represent reagents that are useful in discriminating between M. tuberculosis and BCG and, in particular, for diagnostic methods which discriminate between exposure of a subject to M. tuberculosis and vaccination with BCG. The invention features these MTBN polypeptides, functional fragments of them, DNA encoding them, vectors, transformed cells, and diagnostic, therapeutic, and prophylactic (vaccine) methods, including genetic vaccination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tuberculosis; immunogenic; soluble; antigen; protective immunity; TB; vaccine; pharmaceutical; infection; diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MAEMKTDAATLGQEAGNFERISGDLKTQIDQVESTAGSLQGQWRGAAGTAAQAAVVRFQE 60
                                                                                                                                                                                                                                                           Novel polypeptide encoded by open reading frames present in Mycobacterium tuberculosis genome and not by the BCG strain of M. bovis, useful as vaccine and for diagnosing tuberculosis infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

composed of Mycobacterium tuberculosis antigens TSBA3 (see AAW64295), 38 kDa antigen (see AAW64364), Tb38-1 (see AAW6431) and DPEP (see AAW64322). It was produced by PCR amplification (see AAV4450-57) of the appropriate antigen DNA sequences, cloning into an expression vector, and expression in E. coli. TbF-2 can be used for serodiagnosis of tuberculosis. The invention relates to compositions and methods foor diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379) comprising antigens or liminuogenic portions of M. tuberculosis antigens, or fusion proteins, DNA sequences encoding such polypeptides, recombinant expression vectors and host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New fusion proteins useful for diagnosis, prevention and treatment of tuberculosis - \,
                                                                                                                                                                                                                                                                                                                                                   This sequence represents a recombinant Mycobacterium tuberculosis tetra-antigen fusion protein, termed TbF-2, composed of the antigens TbRa3, 39KD, Tb38-1 and DBEP. The fusion protein is expressed in host cells using a vector carrying a polynucleotide (see AAZ20198) comprising the 4 coding sequences. The invention provides fusion proteins (see AAX32059-71) containing at least 2 M. tuberculosis
                                                                                                                                                                                                                                                                                                                                   2 AEMKTDAATLGQEAGNFERISGDLKTQIDQVESTAGSLQGQWRGAAGTAAQAAVVRFQEA 61

                                                                                                                                                                             This sequence represents the fusion protein TbF-2 which is composed of immunogenic polypeptides from Mycobacterium tuberculosis (MT). This protein is used fin a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of TB.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's, DNAs encoding them, derived fusion proteins and other, polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAZ19249 to AAZ19460 and AAX39083 to
                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                            NEMKTDAATLGQEAGNFERISGDLKTQIDQVESTAGSLQGQWRGAAGTAAQAAVVRFQEA 61
antigns. The new fusion proteins and polynucleotides encoding them pre useful as vaccines for preventing tuberculosis (claimed), for diagnosis (via in vitro assays or intradermal skin tests for detection of anti-M. tuberculosis antibodies), monitoring of disease progression, and treatment of tuberculosis. They are more effective immunogens than mixtures of the individual protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antigens from Mycobacterium tuberculosis useful in diagnostic

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's, DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAX19249 to AAX19460 and AAX39083 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

invention describes novel recombinant antigens and their encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Mycobacterium tuberculosis.

```
The sequence represents Mycobacterium fusion protein antigen TbF15 consisting of a His tag for purification, antigens Ra3, 38tD, 38-1 and FL-TbH4 (full-length TbH4). Compositions comprising at least 2 heterologous antigens, as a fusion protein, and vectors expressing the fusion proteins are used as vaccines to prophylactically immunise mammals (especially humans) against infection by Mycobacteria. The compositions contain at least 2 heterologous antigens that increase the scrological sensitivity of individuals infected with tuberculosis, a disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           94,
